

Charging a Card in POS/ROM/Units

At the end of a ticket, after you have pressed the “Write” button, you can select a credit card as the method of payment.

- In the “Description” field, choose the type of card the customer wants to use from the drop-down menu.
 - If the customer wants to pay with **credit**, select the type of credit card.
 - If the customer wants to pay with **debit**, select “DEB-DEBIT CARD.”
 - **NOTE: You will be unable to switch between debit and credit in EPIN, our credit-card charging application.**
- Hit “Tab” on the keyboard until you pass through the dollar amount. EPIN will open in a new window.

The screenshot shows the EdgePay IN interface. At the top right, it says "EdgePay IN". Below this, there are four main sections:

- Customer Information:** A box containing the text: "ALEXANDER SMITH", "10341 SHINGLETON ROAD", "KINGSVILLE NAS", "TX 78363".
- Type (Choose one):** A dropdown menu with the following options: DIS, MCD, VIS, VIS. The "VIS" option is currently selected.
- Card Number:** A text field showing "9424".
- Transaction Details:** A box containing the text: "Invoice Number 29213", "Tax Amount \$0.07", "Total Amount \$1.07".

On the right side of the interface, there are four blue buttons: "Authorize Token", "Manual Entry", "Swipe Card", and "Quit". A vertical "MENU" button is located on the far right.

EPIN—Layout

- **Customer Information:** The Customer Information box displays the customer's name and address.
- **Transaction Details:** The Transaction Details box displays the details of the transaction being paid for, which include:
 - The invoice number
 - The tax amount
 - The total amount

Charging a Card in EPIN: There are four different methods of charging a card in EPIN: three for credit cards, and one for debit cards. Charge a card using the blue buttons on the right side of the window.

- **Credit Cards**
 - **Authorize Token:** Use this method if the customer wants to pay with a token.
NOTE: This button will not be accessible unless you are using a GPEP processor and the customer is paying with a public credit card.
 - Select the card you want from the list in the middle box. The chosen card will highlight in green.
 - Click "Authorized Token." The program will run the card automatically without requiring any manual action.
 - When the signature is required, the program will prompt you to ask the customer for their signature (see below). The customer must sign their name on the terminal to complete the transaction.

The screenshot shows the EdgePay IN interface with a "Get Signature" dialog box open. The dialog box has a title bar "Get Signature" and a close button (X). The main text in the dialog box says "Ask customer to sign using the terminal".

The background interface shows the same layout as the previous screenshot, but with different data:

- Customer Information:** "SAM UGALDE", "5998 ARBOR COURT", "EL PASO", "TX 56456".
- Card Number:** "56456".
- Transaction Details:** "Tax Amount \$2.00", "Total Amount \$4.24".

The buttons on the right are "Authorize Token", "Manual Entry", "Swipe Card", and "Quit".

- If the transaction is successful, a version of the following screen will display:

Shortcut			EdgePay IN	
Customer Information ALEXANDER SMITH 10341 SHINGLETON ROAD KINGSVILLE NAS TX 78363	Type (Choose one) DIS 9424 MCD 0045 MCD 2229 VIS 1119	Transaction Details Invoice Number 29286 Tax Amount \$.14 Total Amount \$2.14	Authorize Token Manual Entry Swipe Card Quit	

Order ID:15100809403500520
Successful transaction: The transaction completed successfully.

← MENU

- If the transaction is not successful, an error message will display. For example, if there is a problem with your merchant account, the following will display:

Shortcut			EdgePay IN	
Customer Information ALEXANDER SMITH 10341 SHINGLETON ROAD KINGSVILLE NAS TX 78363	Type (Choose one) DIS 9424 MCD 0045 MCD 2229 VIS 1119	Transaction Details Invoice Number 29287 Tax Amount \$.28 Total Amount \$4.28	Authorize Token Manual Entry Swipe Card Quit	

Order ID:15100809432300522
Global Payments Error: UNAUTH USER

← MENU

- After a successful transaction, the program will return to the Invoice screen. The transaction will then be listed in the box titled "Customer Invoice Transactions To Post."
- **Manual Entry:** Use this method to charge the card by manually entering its information.

- Click "Manual Entry." The following screen will appear:

EdgePay IN

Card Information

Card Data: *

Navigation: Authorize Token, Manual Entry, Swipe Card, Quit

Menu: MENU

- Begin typing the card number into the "Card Data" field.
- The field will then change to "Card Number" and reveal the remaining information fields, as seen below:

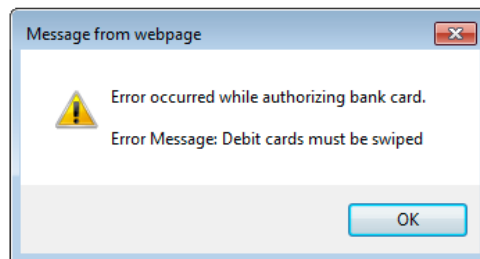

The screenshot shows a web form for "Customer Credit Card Maintenance". At the top, there are logos for Visa, MasterCard, and Discover. Below these, the "Card Number" field is highlighted in red and contains the number "42". A message below the field says "Please enter a valid Card Number". The "Expiry Date" field consists of two drop-down menus, the first showing "10" and the second showing "2015". Below this is a "CVV" field with a question mark icon and an empty input box. The "Customer Information" section follows, with fields for "Customer Title", "First Name", "Middle Name", "Last Name", "Company Name", "Address One", "Address Two", "City", "Country" (a drop-down menu), "State or Province", and "Postal Code". At the bottom of the form are two buttons: "Make Payment" and "Cancel".

- Finish typing in the card number. If the field accepts the card number, it will turn from red or yellow to green.
- Select the card's expiration month and year from the drop-down menus next to "Expiry Date."
 - You can also enter the card's CCV number and the customer's information in the fields, though only the card number and the expiration date are required to complete the transaction.
- Click "Make Payment." The program will process the transaction and indicate that it was successful before returning to the Invoice screen. The transaction will then be listed in the "Customer Invoice Transactions To Post" box.
- If the transaction does not go through, the screen will show an error message.
- **Swipe Card:** Use this method to charge the card using a credit card terminal.
NOTE: This is the method to use when running a Chip transaction.
 - Click "Swipe Card." The screen will bring up the following image reading "Processing Through Terminal":

Processing Through Terminal

- If for whatever reason the program is not properly connected to your terminal, an error message will appear. For example, “Connecting Remote Client Manager timeout” if you are not connected to Remote Client Manager, which runs your terminal software.
 - Process the card through the terminal.
 - When the signature is required, the program will prompt you to ask the customer for their signature. The customer must sign their name on the terminal to complete the transaction.
 - Once the transaction is completed, the program will show either that the transaction was successful, or an error message indicating it was unsuccessful.
 - The program will then return to the Invoice screen, where the successful transaction will show in the “Customer Invoice Transactions To Post” box.
- **Debit Cards**
 - **Swipe Card:** Use this method to charge the card using a credit card terminal.
- NOTE:** This is the **only** method by which you can charge a debit card.
- Click “Swipe Card.” If you try to process the card through any other method, the following error message will appear:

- The program will bring up the “Processing Through Terminal” image. Process the card through the terminal.
- The program will then show either that the transaction was successful or an error message indicating it was unsuccessful.

- It may also show a screen requesting you to ask the customer for their signature. If this is required for the transaction through the terminal, make sure they sign.
- If the transaction is successful, the program will return to the Invoice screen and show the successful transaction in the “Customer Invoice Transactions To Post” box.
- **NOTE:** Not all debit cards will render an authorization number with the transaction. Some may simply say “Authorized.”

Double-Billing: In all cases, if you are about to double-bill a card for whatever reason, the system will automatically prevent you from doing so and show you an error message, such as “Duplicate Card Entry.”

Completing the Ticket: Once you have charged the card and been returned to the Invoice screen, click the “Write” button at the bottom of the screen to add the transaction to the ticket in POS.

Daily Transaction Log: Regardless of whether the transaction is successful or not, it will appear in the daily transaction log, which will automatically print out during the night after the end of a business day.
